

Carbon Reduction Plan

Supplier name: Servoca Nursing & Care

Publication date: 14th December 2023

Commitment to achieving Net Zero

At Servoca Nursing & Care, we are committed to achieving Net Zero emissions by 2050.

Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: 2022

Additional details relating to the baseline emissions calculations

At Servoca Nursing & Care, our greenhouse gas (GHG) emissions are calculated in line with the GHG Protocol Corporate Standard.

- **Scope 1** comprises of GHG emissions produced by the company directly. As such, this includes activities that involve direct consumption of natural gas, heating oil and diesel fuel as well as emissions produced by company vehicles. Our Scope 1 emissions are calculated based on the use of company owned/leased vehicles.
- **Scope 2** comprises of GHG emissions produced by the company indirectly. This includes activities such as the purchase and consumption of local electricity or heating. Scope 2 emissions are calculated based on total energy usage on sites.
- Scope 3 comprises of other indirect GHG emissions, which are associated with the company, up and down its value chain. Servoca Nursing & Care are a service provider and hence, do not supply any goods to our customers. Other indirect GHG emissions that will be applicable include activities such as business travel, employee commuting, waste disposal and downstream emissions from Fuel and energy. Scope 3 emissions are calculated based on the various calculation methods recommended by the GHG protocol guidance.

Baseline year emissions: 2022

EMISSIONS TOTAL (tCO2e)

Scope 1	Vehicle use for company business = 4.93 tCO2e	
Scope 2	Electricity consumption = 11.80 tCO2e	
Scope 3	Upstream:	
(Included	Fuel and energy:	
Sources)	0.46 tCO2e from the extraction, production, and transportation of coal consumed in the generation of electricity consumed by Servoca Nursing & Care.	
	1.08 tCO2e from the generation (life cycle, i.e., upstream activities and combustion) of electricity that is consumed (i.e., lost) in transmission and distribution.	
	Waste generated in operations:	
	0.10 tCO2e - minimal waste is produced within the business as we are a	
	service based business.	
	Business travel:	
	8.45 tCO2e produced through a combination of car, rail and taxi travel.	
	Employee commuting:	
	573.50 tCO2e produced through a combination of car and public transport by our workforce.	
	Upstream leased assets:	
	CO2e output from leased assets (as a lessee) is deemed to be immaterial given we are a service based business with limited leased assets that produce significant emissions.	
	Upstream transportation and distribution:	
	Not applicable as we are a service based business.	
	Other upstream emission areas are deemed to be out of scope.	
	Downstream:	
	Downstream emissions are N/A for our business given that we are a recruitment business that has no leased assets (as a lessor), sold products, or franchise/investments and hence, no downstream transportation or distribution.	
Total emissions	600.32 (tCO2e)	

Current year emissions will be a new category added in our 2023 report to review our performance against the targets determined below.

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets:-

Year	Emissions	Emissions reduction target
	in tonnes (tCO2e)	against 2022 baseline
2023	570.30	5%
2024	540.29	10%
2025	510.27	15%
2026	480.26	20%
2027	450.24	25%

We project that carbon emissions will decrease over the next five years to **450.24** tCO2e by **2027**. This is a reduction of **25**%.

Carbon reduction projects

In the future we hope to implement measures such as:

- Adopting LED/PIR lighting controls
- Training and in house meetings to be conducted over zoom where possible to reduce the amount of travel
- Employees encouraged to use public transport when travelling for business purposes
- Moving to a fleet that utilizes EVs
- Electricity supply is determined by the landlord so an annual review from the landlord will be requested to ensure where possible that they are using an appropriate electricity supplier
- Continue to reduce the amount of paper used in the office currently all timesheets and invoices are electronic which has seen a dramatic decrease in the amount of paper being used
- Liaising with our landlords across our property portfolio to ensure we have an aligned approach on reducing our carbon footprint

Declaration and sign off

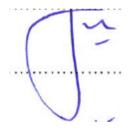

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard⁷ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting⁸.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard⁹.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the supplier:

James Turner
Managing Director
Servoca Nursing and Care Ltd
